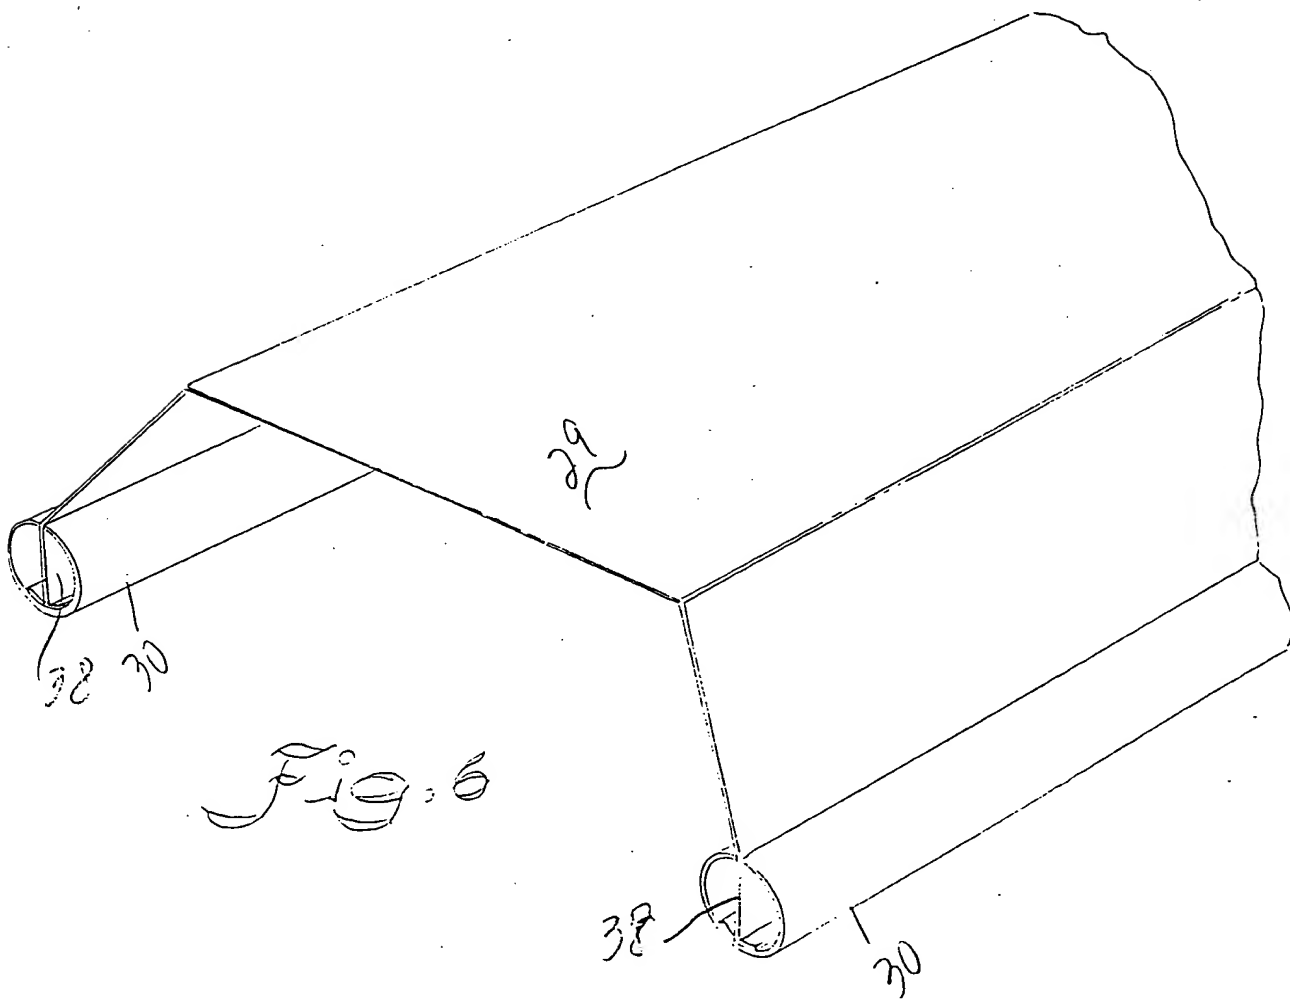

Fig. 6

A hand-drawn map of a river system. The river is represented by a solid line that winds from the top right towards the bottom left. Several dashed lines branch off from the main river, representing tributaries or boundaries. There are two circular points marked on the river. The first point is located on a tributary on the left side, with the number '30' written next to it. The second point is located on the main river further downstream, also with the number '30' written next to it. The number '29' is written near the first point, and '46' and '47' are written near the second point. The map includes some sketchy vegetation at the top left and a dashed line running diagonally across the upper right.
